

MARINE PEST WARNING

The Mediterranean fanworm has been found in Lyttelton Port. This pest can spread rapidly on dirty boat hulls and could harm our precious marine environment.

WHAT YOU CAN DO TO HELP

You can help prevent the spread of the Mediterranean fanworm to other areas by ensuring your hull is clean before leaving Lyttelton.

- Regularly clean your hull.
- Dispose of any debris removed in land-based bins.
- Keep your antifoul coating in good condition and reapply as required.
- Check and clean your hull and other equipment (buoys, mooring lines, fishing gear, boat trailers) before moving to a new location.
