

# **Manual 15: Approvals Fish-Game-Meat Chemicals 2002**

This section of Manual 15 lists chemical compounds authorised for use in licensed fish, game and meat processing premises.

These lists of authorised chemical compounds supersede all previous lists and are valid from 1 November 2001 until 31 October 2002.

## **1. Introduction**

---

- 1.1** Manual 15 is an official circular issued by the Director (Animal Products) of the Ministry of Agriculture and Forestry, pursuant to the Meat Act 1981 under delegated authority from the Director-General of Agriculture and Forestry (D-G). Manual 15 forms part of a series of specifications issued by the D-G which relate to the supply of goods or services to the industries that are regulated under the Meat Act 1981 and pursuant regulations. The other specification in this series is Brands-Inspection Legend Material-Container Seals.
- 1.2** Regulation 66, of the Meat Regulations 1969, regulation 70, of the Game Regulations 1975 and First Schedule, Part II, Fish Export Processing Regulations 1995 provide for the prohibition of chemical substances which are likely to be harmful to or contaminate any carcasses, fish, game, game meat, meat or meat products in any abattoir, export packing house, export slaughterhouse, packing house, cannery or rural slaughterhouse. In order to meet the requirements of importing countries and with the agreement of the industries concerned, chemical compounds are evaluated and authorised for use in licensed premises.
- 1.3** This manual describes the types of compounds which require specific evaluation and authorisation, the process of obtaining authorisation, the conditions under which authorisation will be given and the current list of authorised compounds.
- 1.4** A revision of all listings will take place annually. The current list of authorised compounds is published in November each year and this will supersede all previously published lists. Compounds which have been evaluated subsequent to the date of the current publication may be used in licensed premises with letters of authorisation.
- 1.5** The revision of listings is based on additions of new authorisations and deletions as a result of suppliers not revalidating compounds, voluntary withdrawal of compounds or failure to comply with the general conditions in the letter of authorisation.

## **2. Compounds Which Do Not Require Evaluation**

---

**2.1** Chemicals which are identified in Sections 2.3 to 2.12 may be used in licensed premises according to the general rules applicable to each sub-section.

**2.2** The labelling of all of the chemicals listed in these sections must prominently display the chemical name and must comply, where appropriate, with the Dangerous Goods (Labelling) Regulations 1978. Trade names may be used in addition to the chemical name. Products so identified are not permitted to contain additional substances.

### **2.3 Production aids - all areas**

The chemicals listed below may be used in edible and inedible areas of premises. When used in edible areas, all edible product and packaging material must be removed from the room. Food contact surfaces which have been treated with these substances must be thoroughly washed to remove all residues then rinsed with potable water.

Calcium chloride

Citric acid

Ethanol

Fish oil

Hydrochloric acid

Hydrogen peroxide

Manganese sulphate

Methylated spirits

Nitric acid

Phosphoric acid

Potassium permanganate and formaldehyde as a fumigant

Sodium carbonate (soda ash)

Sodium chloride

Sodium citrate

Sodium hexametaphosphate

Sodium hydroxide (caustic soda)

Sodium metabisulphate

Sodium metasilicate (anhydrous and pentahydrate)

Sodium perborate

Sodium phosphate (mono, di and tribasic)

Sodium sulphate (anhydrous)

Sodium tripolyphosphate

Sulphuric acid

Tetrasodium pyrophosphate

Zinc oxide

## 2.4 **Production aids - inedible areas only**

The chemicals listed in this section may only be used in inedible areas. Materials and equipment which have been treated with these chemicals must be thoroughly washed to remove all residues before being used in edible areas.

Kerosine  
Naphthalene  
Oxalic acid  
Paraformaldehyde  
Turpentine  
White spirits

## 2.5 **Production aids - special purpose Refrigerants**

Ammonia  
Fluorocarbon refrigerants that are not prohibited under the Ozone Layer Protection Act 1996.

## 2.6 **Processing aids - inedible products**

The chemicals listed in this section may be used in the processing of the by-products as specified. These substances are not permitted in any edible area of any premises.

### **Hides and pelts**

Ammonium chloride  
Ammonium sulphate  
Aluminium sulphate  
Boric acid  
Dichlorophen  
Hydrated lime  
Sodium borate (borax)  
Sodium hydrosulphide  
Sodium sulphide

### **Antioxidants for inedible tallow, meat meal and pet food.**

The amounts used must be consistent with good manufacturing practice.

Butylated hydroxyanisole (BHA)  
Butylated hydroxytoluene (BHT)  
Ethoxyquin  
Herbal antioxidants  
Tocopherols

### **Defoaming agents.**

The amounts used must be consistent with good manufacturing practice.

Dimethylpolysiloxane

## 2.7 Processing chemicals - direct food contact

The chemicals identified in this section may be used in direct contact with edible products listed in the following table. The use of these chemicals must be in accordance with New Zealand Food Regulations 1984, food standards required by importing countries or, where not otherwise specified, good manufacturing practice. All chemicals used must conform to standards for food additives regulation 245, Food Regulations 1984.

Chemical	Use	Product
Butylated hydroxyanisole (BHA)	antioxidant	edible oils
Butylated hydroxytoluene (BHT)	antioxidant	edible oils
Calcium hydroxide (hydrated)*	denude mucous membranes	tripe
Calcium oxide*	denude mucous membranes	tripe
Citric acid	anticoagulant	blood
Hydrochloric acid	buffer, pH adjuster	tripe
Hydrogen peroxide*	bleach	tripe, shark fin
Propyl gallate	antioxidant	edible oils
Sodium carbonate*	denude mucous membranes	tripe
Sodium carbonate*	Pig scald agent	pigs
Sodium citrate	anticoagulant	blood
Sodium citrate*	denude mucous membranes	tripe
Sodium chloride	preservative	casings
Sodium gluconate*	denude mucous membranes	tripe
Sodium hydroxide*	denude mucous membranes	tripe
Sodium metabisulphite	preservative	casings
Sodium silicates*	denude mucous membranes	tripe
Tertiary butylhydroxyquinone (TBHQ)	antioxidant	edible oils
Trisodium phosphate*	denude mucous membranes	tripe

\* the chemical must be removed from products by rinsing with potable water

## 2.8 Processing aids - incidental food contact

Substances identified in this section may be used in solutions for sanitising clean food surfaces, for treating water supplies or as release agents. These substances must be of an appropriate quality and must be used in accordance with the conditions for approval of chemical compounds Code C26, Code C 41, C 43 or Code C 61.

Aluminium sulphate  
 Chlorine  
 Chlorine Dioxide  
 Calcium hypochlorite (hydrated and containing 65% active ingredient)  
 Ethyl alcohol  
 Fish oil

Isopropyl alcohol  
Hydrogen peroxide  
Ozone  
Paraffin oil  
Potassium permanganate  
Sodium carbonate (soda ash)  
Sodium hydroxide  
Sodium hypochlorite  
Vegetable oil

The following substances may be used according to the conditions for code C 43 sanitising solutions provided the concentration of chlorine does not exceed 200ppm in the case of the chlorinated compounds.

Chlorine  
Calcium hypochlorite (hydrated and containing 65% active ingredient)  
Ethyl alcohol  
Isopropyl alcohol  
Hydrogen peroxide, 35% aqueous solution  
Sodium hypochlorite

## 2.9 Meat marking inks

2.9.1 Any meat marking ink which conforms to the following criteria may be used in licensed premises. These substances do not require evaluation or specific listing.

The formulation of branding and grading inks must comply with the recommendations contained in MIRINZ\* Publication 815 or with the specifications for thermo setting inks, MIRINZ 819.

\*MIRINZ

Meat Industry Research Institute of New Zealand (Inc)  
P.O. Box 617, Hamilton.

The labelling on any container of branding or grading ink must clearly state the name and the colour index number of the dye used and other ingredients. The label must also contain the statement:

**This ink is prepared according to the recommendations in MIRINZ 815**

or

**This ink is prepared according to the specification in MIRINZ 819**

2.9.2 Branding and grading inks may only contain the following dyes:

<b>Dye</b>	<b>Colour Index Number</b>
Amaranth	CI 16185
BASF Flexo Violet 600	CI 42535
Brilliant Blue FCF	CI 42090
Chocolate Brown HT	CI 20285
CI Solvent Violet 8	CI 42535:1
Erythrosine	CI 45430
Hexacol Chocolate Brown HT Lake	CI 20285
Lynlake Brown HT 620	CI 20285
Methyl Violet	CI 42535
Violet BNP	CI 42580

2.9.3 Inks which have been prepared for the branding or grading of carcasses or products must be used in accordance with any regulations and directives.

**Note:** Inks prepared from methyl violet dyes (CI 42538) are only to be used for branding EC products; these must not be used for meat grade marking.

2.9.4 Inks for marking pet food may be prepared from the following:

- A black dye, colour index number (CI) 28440, variously named Food Black, Brilliant Black, Permicol Black or Hexacol Black PN; or
- Charcoal; and

any of the solvents and diluents listed in section 2.9.5. The labelling of these inks must contain a list of ingredients.

2.9.5 All meat marking inks may contain any of the following solvents and diluents:

Ethanol  
Ethyl acetate  
Edible grades of hardened vegetable fat  
Glycerol in its mono, di and tri-acetic acid esters  
Hydrogenated castor oil, Sett HR1  
Isopropyl alcohol  
Propylene glycol

## 2.10 Condemned material stains

2.10.1 The following dyes may be used in the preparation of condemned material stains:

Brilliant Green FCF  
Hexacol Green R1891  
Green Powder Colour QZ 03195  
Green Powder Colour QZ 03204  
Green vegetable dyes

2.10.2 The following formula would meet USDA requirements for denaturing condemned material:

1 part	FD & C No3 Green colouring
40 parts	Water
40 parts	Liquid detergent
40 parts	Oil of citronella, or
	Crude carbolic acid, or
	Cresylic disinfectant

## 2.11 Packaging materials

2.11.1 Food contact packaging materials do not require evaluation. The manufacturer or supplier is required to provide a guarantee that the material complies with the relevant United States food additive and packaging material regulations; IS 3.

2.11.2 Paperboard cartons and other materials which are employed for outer packaging of edible products and are not intended for direct food contact do not require evaluation.

## 2.12 Packaging gases

Gases that meet food grade standards may be used in packaging systems. The gases must be used according to good manufacturing practice for the type of packaging system.

---

### 3. Compounds Which Require Evaluation

---

#### 3.1 Application procedure for gaining chemical authorisation

The manufacturer or distributor shall submit an application on the form provided (Section 7) with a sample and data as outlined below for each chemical compound. The following information is required from the manufacturer or distributor.

**3.2** The product trade name as it appears, or will appear, on the label. This will be the name which will be used for listing of the compound.

**3.3** Product composition data listed under the following headings:

- the chemical name of each ingredient, this should follow the listing in Merck Index, British Pharmacopoeia, Martindale - The Extra Pharmacopoeia etc.
- the trade name of each ingredient where applicable.
- the trade source of the ingredients
- the percentage of each ingredient in the complete formulation.

**Note:** Dyes must be identified by the Colour Index Reference.

**3.4** Describe the nature of the compound (e.g., cleaner, detergent, lubricant)

**Note:** if the compound is a pesticide it must be registered by the Pesticides Board or otherwise comply with the provisions of the Pesticides Act 1979. Application for pesticide approval may be made after a registration number has been granted or a letter of intent has been received from the Pesticides Board. A copy of the letter must be included with the application.

**3.5** The label (or stenciled copy) must include adequate directions for the use of, and include precautionary statements for the safe handling and storage of, the compound. Alternatively, product information sheets should be submitted with the application if the label does not include adequate directions as to how the compound should be used.

**3.6** Manufacturers are permitted to include a statement on the label to the effect that the product is authorised for use in licensed meat premises. Any statement made, however, must include the approval code and should be limited one of the following options:

MAF Approved for Use in Licensed Meat Premises <code>; or  
MAF Approved <code> (Fish Game Meat)

The label statement must be acceptable to MAF and must not be misleading. If for any reason the authorisation becomes void the label cannot be further used and all label stocks must be destroyed. Stocks of product which exist after the date of withdrawal of authorisation and which contain label statements to the effect that a product has MAF approval may not be sold to any person without the consent of the MAF.

**3.7** A 200 ml or 200 g sample is required with each application; this may be forwarded separately from the application. The sample is to be securely stopped and wrapped.

**3.8** Information relating to listing of disinfectants suitable for use in foot-and-mouth disease emergencies may also be included in the application provided the compounds meet the criteria in Section 6 of this manual.

### **3.9 Confidentiality**

MAF regards all information supplied in respect of any application for compound authorisation as confidential. No information will be supplied to any other person or company without the written authority of the original applicant. In the event of any change of ownership of companies or franchises the vendor must notify MAF of the change and authorise any disclosures of information relevant to the transaction

**3.10** The evaluation fee, as indicated on the application form, is payable at the time the application is made.

**3.11** The manufacturer or the distributor submits samples, data and the evaluation fee to:

Manual 15 Chemicals  
C/o Advisor (Risk Management Programmes)  
Animal Products Group  
MAF Food Assurance Authority  
PO Box 2526  
**Wellington**

**3.12** A letter of authorisation will be issued following evaluation of the compound. This letter may be used as evidence of authorisation until the compound appears in the approvals list. The authorisation will remain valid until 31 October following the 5-year anniversary of the letter of authorisation. The applicant will be notified when revalidation of an authorised compound is required.

Letters of authorisation will be issued with the following general conditions:

- This compound is authorised for use in meat, fish, game and game meat premises.
- *<special condition relative to the product will be inserted here>*
- This authorisation may be withdrawn at any time due to unauthorised directions for use, or unsatisfactory performance, or any change in product formulation or manufacturer. The product must be used in accordance with the manufacturer's instructions and specifications. The label may include a statement to the effect that the product is authorised for use in licensed meat premises. Any statement made, however, must include the approval code and must be limited to one of the following options:  
MAF Approved for use in Licensed Meat premises *<code>*  
MAF Approved *<code>* (Fish Game Meat)  
The statement on any label must be acceptable to MAF and must not be misleading. This authorisation must not be used as a MAF endorsement of any claim made for the product by the manufacturer.
- This authorisation will remain valid until the trade name of this product retires from the Manual 15 list of authorised compounds.

### **3.13 Revalidation of authorised chemicals**

Chemicals that have been authorised will remain valid until 31 October following the 5-year anniversary of the letter of authorisation. Manufacturers will be notified by letter when compounds are due for revalidation. Applications for revalidation must be received by the date stated in the letter of notification. Failure to do so will result in removal of the product from the list of authorised compounds. The letters will be sent to the named company and to the address listed in MAF records. MAF accepts no responsibility to verify proprietorship of products where this is different from MAF records.

### **3.14 Changes to be notified**

Changes to the authorised product name, formulation manufacturer or distributor are to be notified to the Advisor (Risk Management Programmes). Failure to give notice of changes will void the approval.

---

## 4. Criteria for Chemical Compounds

---

### 4.1 Introduction

Chemical compounds are assessed for their suitability to use in food areas within licensed meat, fish and game premises. Of paramount importance is the protection of edible product from the effects of chemical substances which could contaminate the product as a consequence of odours and residues remaining on food surfaces.

### 4.2 Lubricants, solvents, combustion additives

**C 11** This may be used in edible areas provided it does not come in contact with edible products or packaging material. Where incidental contact with the food surface occurs, the surface must be thoroughly cleaned and washed to ensure no residue remains.

**C 12** This may be used in edible areas. Before use, all edible product must be removed from the room. No edible product is permitted in the room while odours remain. Where incidental contact with the food surface occurs, the surface must be thoroughly cleaned and washed to ensure that no residue remains.

**C13** This may be used in edible areas. The lubricant must be confined in enclosed housings. The Inspector must be informed in the event of any leakage. Where incidental contact with the food surface occurs, the surface must be thoroughly cleaned and washed to ensure no residue remains.

**C 14** This may only be used in non-food areas.

**C 15** This is permitted to be used during processing of food to lubricate moving parts of equipment whereby the lubricated surface is either an integral part of the food contact surface, or is contiguous with the food contact surface and contamination could result from bearing seal leakage. The equipment is to be maintained, including the application of lubricants, according to the specifications of the equipment manufacturer. Only sufficient lubricant is to be used to achieve the desired effect.

When used in the manner permitted, all lubricated surfaces are to be maintained according to requirements for sanitation of food contact surfaces. When used in any other manner that may result in incidental contamination of a food surface, the surface is to be cleaned by washing to ensure no free substance remains that could be transferred to food being processed.

**Note:** Lubricants in the C 15 category must conform to the composition requirements of Title 21 Part 178.3570 of the United States Code of Federal Regulations. The manufacturer should provide instructions to food processors which reflect the conditions of use for the C15 classification of food equipment lubricants.

### 4.3 Surface treatments

**C 21** This may be used in edible areas provided it does not come in contact with edible products or packaging material. Where incidental contact with the food surface occurs, the surface must be thoroughly cleaned and washed to ensure that no residue remains.

**C 22** This may be used in edible areas. Before use, all edible product must be removed from the room. No edible product is permitted in the room while odours remain. Where incidental contact with the food surface occurs, the surface must be thoroughly cleaned and washed to ensure that no residue remains.

**C 23** This may be used in edible areas. Before use, all edible product must be removed from the room. No edible product is permitted in the room until all treated surfaces have been adequately protected with an approved coating. Where incidental contact with the food surface occurs, the surface must be thoroughly cleaned and washed to ensure that no residue remains.

**C 24** This is permitted for marking animals. It may only be used in stockyards. It must not be used in a manner likely to contaminate the carcass during dressing.

**C 25** This may not be used in areas where edible products are processed or stored.

**C 26** This is permitted on food contact surfaces as a release agent or as an anti-rust film. The amount used should be the minimum required to accomplish the technical effect. The surface must be wiped or adequately drained after application so that no free substance remains.

**Note:** For surface treatment compounds with incidental food contact, the formulation must be at least equivalent to the United States Code of Federal Regulations, Title 21 Part 178. In addition, the label must give clear instruction as to the manner in which the product is to be used; this must include instructions on ventilation if volatile solvents and diluents are present. Products containing solvents must not be applied in food areas. Where compounds are specifically intended to prevent rust on skids and gambrels, a treated sample must be included with the application for approval.

#### 4.4 Cleaners

**C 31** This may be used in all areas. Before use, all edible product and packaging material must be removed from the room. After using this compound, food surfaces must be thoroughly rinsed with potable water before production starts.

**C 32** This may not be used in edible areas. The perfume must not be used to mask the odours of unsanitary conditions. This compound must be used in a manner that prevents the perfume invading any edible area.

**C 33** This is a laundry compound. If treated fabric directly or indirectly comes in contact with edible product, a thorough rinse with potable water must follow the laundering process.

**C 34** This compound may only be used in non-food areas. All equipment and utensils treated with this compound must be thoroughly cleaned, then rinsed with potable water before being returned to edible areas.

**C 35** Window cleaner for all areas. No edible product is permitted in the room during cleaning. Incidental contamination of food contact surfaces must be thoroughly cleaned, then rinsed with potable water.

**C 36** This may not be used in areas where edible products are processed or stored.

**C 37** General purpose detergent which is not for use on food surfaces but may be used on floors and walls. Before using this compound in food areas, all product and packaging material must be removed from the room. Accidental spillage on to food surfaces must be thoroughly washed off with potable water.

**C 38** This may be used for cleaning large processing rooms provided the room can be divided into distinct areas, no edible product or packaging material is present in the area during cleaning and there can be no possibility of contamination of product or packaging material as a result of cleaning. As a general cleaner in all other instances, all edible product and packaging material must be removed from the room before cleaning starts. After using this compound, food contact surfaces must be thoroughly rinsed with potable water before production starts.

#### 4.5 Sanitisers

**C 41** This may be used in all areas. Before use, all edible product and packaging material must be removed from the room or carefully protected. After use, surfaces must be thoroughly rinsed with potable water before production starts. This product must always be used at dilutions recommended by the manufacturer.

**C 42** Before use, all edible product and packaging material must be removed from the room. This may be used on clean hard surfaces, a rinse with potable water is not required. Food contact surfaces must be thoroughly drained to minimise residues. On non-food surfaces, such as floors, walls and ceilings, higher concentrations may be required to control microbial growth. This is allowed provided there is no risk of contamination of the edible product. Where these conditions cannot be met a potable water rinse is required. This product must always be used at the dilutions recommended by the manufacturer.

**C 43** This may be used as a no-rinse sanitiser on clean hard surfaces in licensed premises which are restricted only to the processing of fish. Before use, all edible product and packaging material must be removed from the room or carefully protected. After use, a rinse with potable water is not required but food contact surfaces must be thoroughly drained to minimise residues. When used as a sanitiser in other licensed premises, surfaces must be thoroughly rinsed with potable water before production starts. This product must always be used at the dilutions recommended by the manufacturer.

#### 4.6 Topical preparations

**C 51** Hand washing and sanitising compound for use in all areas. After using this compound, hands must be thoroughly rinsed with potable water. There must be no odour left on the hands.

**C 52** Barrier cream, dermatological cream, hand cleaner or body wash. This compound cannot be used by persons employed in slaughter or handling edible product at any stage during dressing or processing. This compound is not permitted in slaughter, dressing or processing areas.

**C 53** Barrier cream restricted to use by operators whose hands are constantly in water and are employed in the preparation of casings, washing of carcasses and washing of bacon. The compound must be supplied from a fixed dispenser located in locker rooms or amenities. After applying this product the hands must be washed before entering the processing area.

**Note:** applications for approval of C 53 compounds must be accompanied by standards of purity of the ingredients and pesticide assays must be provided for any lanoline used in the formulation. The label must give clear instruction as to the manner in which the product is to be used.

**C 54** Hand sanitising compound for use in all areas. The compound must be supplied from a fixed, metered dispenser located a sufficient distance from the processing line to prevent product contamination. Hands must be washed before application of the sanitiser. After use, the hands need not be rinsed but must be dry before the operator returns to the processing line.

**C 55** Special purpose skin compound. This must be supplied from a fixed dispenser located in locker rooms or amenities. May be used by personnel in edible areas provided the treated skin is fully protected by an impervious covering at all times during processing.

**C 56** Hand washing compound for use in all areas. After using this compound hands must be thoroughly rinsed with potable water. There must be no odour left on the hands.

#### 4.7 Water Treatment Products

**C 61** This is permitted in potable water. The final concentration of the active element, at the point of use, shall conform to the limits stated in directives on potable water.

**C 62** These compounds are used for treating boilers, steam lines and/or cooling systems. Treated water must not be used in edible areas, or used in a manner that could contaminate edible product or stock drinking water. Steam produced from treated water must not be used in edible processes or come in contact with edible product.

**C 63** These compounds are used for treating boilers and steam lines where the steam produced may contact edible product.

**C 64** Compound for treating sewer or drain lines. This may be used in any area. Before use in edible areas all edible products must be removed from the room and the drains must be thoroughly flushed before edible operations re-commence. Solids recovered from waste water may not be used in the production of animal foods.

**C 66** Wastewater treatment compound. This may be used in effluent treatment and waste streams where solid wastes are processed through solids recovery systems.

#### 4.8 Pesticides

**Note:** pesticides must be registered with the Pesticides Board, and the label must display the registered number. Insecticides containing perfumes are not permitted in the Type A classification.

**Type A** Insecticide for use in all areas. This insecticide may only be used in edible areas as a space spray provided that, before use, all edible products and packaging materials, except canned products, are removed from the room. After using this insecticide the room must be adequately ventilated, and all food surfaces thoroughly washed with potable water before edible products and packaging material are returned to the room.

**Type B** This insecticide is not permitted in any edible product area or any area where edible product or packaging material is stored. It must be used in a manner which prevents the entry of the insecticide into edible product areas or stores containing packaging material.

**Type C** This rodenticide may only be used in premises according to the requirements of a vermin control programme which has been documented to relevant MAF specifications. It may be used in food areas provided there is no exposed product or food ingredient present in the room. It must be removed from edible areas before processing operations commence.

**Type D** This pesticide must be used strictly in accordance with the special conditions contained in the letter of authorisation. A copy of this letter must be available to the Inspector of the premises.

#### 4.9 Packaging Materials

**C 81** This material may be used in contact with edible product. The amount used shall not be greater than is required to accomplish the desired physical or technical effect.

**C 82** This material is for packaging only and must not come in contact with edible products.

**C 83** This may be included with packaged meat as part of the packaging system. The sachet must remain intact and none of the contents are to come in contact with meat.

#### 4.10 Food Additives

**C 91** This must be used in accordance with an approved process.

**C 92** This compound may be used in direct contact with product.

#### 4.11 Miscellaneous products

**C 101** This must be used in accordance with the following special conditions:  
<special conditions inserted>  
A copy of this letter must be available to the Inspector of the premises.

**C 102** This compound must not be used in any area where edible products are processed, packaged or stored. It may be used in inedible processing areas or external areas. The compound must not be used to mask the odours of unsanitary conditions. Compounds must be used in a manner that prevents any perfume invading an edible area.

## 6. Disinfectants for Foot-and-Mouth Disease Responses

---

### 6.1 Introduction

Disinfectants are used to inactivate the foot-and-mouth disease (FMD) virus to prevent the spread of the disease to animals. FMD virus is extremely sensitive to changes in pH and the most effective disinfectants are those with a pH below 3 (acidic) or above 11 (alkaline). This section lists trade compounds currently approved for use in licensed premises that, when used at the dilutions indicated, are expected to be suitable for cleaning and disinfection in the event of a foot-and-mouth disease emergency being declared.

### 6.2 Requirements

#### 6.2.1 Specifications

Compounds must conform to one of the following categories

- acidic disinfectants suitable for a wide range of surfaces without the risk of corrosion.
- alkaline disinfectants (non-corrosive) products which would give a degree of metal protection and which are suitable for a wide range of surfaces without the risk of corrosion.
- alkaline disinfectants (corrosive) caustic-based products suitable for drains and sewers and surfaces where corrosion would not be regarded as critical.

**Note:** the product label should give a general indication as to the suitability of the disinfectant for different types of surfaces

#### 6.2.2 Dilution

The final strength of the disinfectant, when mixed with water, must be a volume/volume percentage for fluid compounds or a weight/volume percentage for solid state compounds. The final strength must achieve a pH of pH 11 or greater for alkaline disinfectants or pH 3 or less for acid disinfectants.

#### 6.2.3 Stock level

The quantity of disinfectant that could be available either:

- on call
- at 48 hours

This information is intended to be used as a guide to the availability of a particular disinfectant should the need arise. It is appreciated that for some compounds large quantities can be manufactured within a short period of time whilst for others the replenishing of stocks will take longer. Stock levels may be listed under either or both of these headings.

### **6.3 Procedures for obtaining listing of compounds**

Manufacturers who consider that a currently authorised compound will meet the requirements for disinfectants may request to have products listed in this section.

**6.4** The information required, in addition to that specified in the procedures for gaining chemical authorisation (see Section 3.1) or revalidation of authorised chemicals (see Section 3.11) is:

- specification
- dilution rate
- stock level.

See Section 6.2

### **6.5 Obligations of manufacturers**

Foot-and-mouth disease would seriously impair New Zealand's ability to trade in agricultural products. The resumption of trade will depend on the efficiency and effectiveness of our ability to respond to an outbreak. Chemical compounds listed in this section could form part of New Zealand's response to an emergency and it is essential that all information published in this list is valid. Any change in formulation, availability, manufacturer or distributor must be notified to the:

Manual 15 Chemicals
