

**National Microbiological Database: National Profile (Poultry per carcass)**  
**1st Quarter 2014**

**Carcass Slaughter and Dressing**

	<i>Salmonella</i>	<i>Campylobacter</i>
Number tested	522	1577
Number when detected	0	538
% prevalence	0.0%	34.1%
	<b>log<sub>10</sub>CFU/carcass</b>	
Mean Log	2.41	
Standard deviation	0.70	
Median	2.00	
Mode	2.00	
Minimum	2.00	
80th percentile	3.00	
95th percentile	3.90	
98th percentile	4.36	
Maximum	6.48	
	<b>(not detected = 2.00)</b>	

The above frequency distribution graph displays count results only when *Campylobacter* is detected. Arbitrarily assigned counts for "not detected" are not displayed.

The LLD for *Campylobacter* count is 2.30 log<sub>10</sub> CFU/carcass

Refer to the % prevalence in the Carcass Slaughter and Dressing table to determine the proportion of "detected" results compared to the total number of samples tested.
